

The SonicWALL PRO 1260

PRO SERIES

Integrated Network Security and LAN Switching Platform

The SonicWALL® PRO 1260 is a total security and switching platform for small businesses and branch offices, combining deep inspection firewall, IPSec VPN, gateway anti-virus, intrusion prevention and content filtering capabilities with a wire-speed, 24-port auto-sensing MDIX Layer 2 switch. This highly integrated, rack-mountable security appliance ships in an unrestricted node configuration and integrates support for SonicWALL's portfolio of leading security services, providing the convenience of a scalable, all-in-one solution at a low total cost of ownership.

Included with the PRO 1260 is SonicOS Standard, which features a streamlined Web GUI and comprehensive suite of easy-to-use configuration and management wizards. Users can easily follow the configuration steps for common user network environments or scenarios, making it simple to set up in any network environment. Every PRO 1260 comes standard with 30 days of SonicWALL's Gateway Anti-Virus/Intrusion Prevention Service, Network Anti-Virus and Content Filtering Service for true multi-layered security.

Features and Benefits

Powerful deep packet inspection firewall protects against malicious application layer attacks originating from either internal or external sources

Integrated gateway anti-virus and intrusion prevention support secures the network from the core to the perimeter against a comprehensive array of dynamic threats including viruses, worms, Trojans, and software vulnerabilities such as buffer overflows, as well as peer-to-peer and instant messenger applications, backdoor exploits, and other malicious code

Built-in 24-port auto-MDIX Layer 2 switch allows multiple home or office computers to network together at wire-speed

Easy-to-use wizards simplify even the most complicated tasks, including initial device configuration, VPN set-up and public server configuration

Dynamic Domain Name Service (DDNS) support drastically reduces the costs associated with hosting e-mail servers, Web servers and site-to-site VPN by allowing the use of dynamic IP addresses

Comprehensive logging capabilities enable logs to be exported directly into plaintext or CSV for help during remote troubleshooting

The optional port can be configured as a demilitarized zone (DMZ) for public facing servers or Internet resources

SonicWALL's "system-on-a-chip" technology delivers 90 Mbps stateful packet inspection firewall and 30+ Mbps hardware-accelerated 3DES and AES VPN throughput

Award-winning Global Management System (GMS) provides comprehensive management and reporting tools for simplified configuration, enforcement and management of global security policies, VPN and services, all from a central location

- **Powerful deep packet inspection firewall**
- **Integrated gateway anti-virus and intrusion prevention support**
- **Built-in 24-port auto-MDIX Layer 2 switch**
- **Easy-to-use configuration wizards**
- **Dynamic Domain Name Service (DDNS) support**
- **Comprehensive logging**
- **Configurable optional port**
- **System-on-a-chip technology**
- **Global management and reporting**
